

Tender Loving Care Costa Brava

We provide all levels of care with a high level of continuity allowing us to build and maintain personal relationships with residents and their families.

The combination of our high staff ratio, resident/family centered care, and personal involvement from management allow residents and families to receive the right amount of care while maximizing independence and quality of life.

We truly strive to make you and your loved ones feel at home and part of an extended family.

How We Are Different Continuity of Care

Hands On Care

The Owner-RN, & Administrator-MD, interact directly with each resident and their families on a regular basis. We work side by side with our caregivers, providing hands on personal care, ongoing support and education. By seeing each resident on a regular basis and working closely with our caregivers we are able to assess and monitor each resident closely.

Direct Interaction & Communication

We have outstanding communication with our residents and their families. We give frequent updates and notify the family of any changes in resident's status. Due to our vast medical experience and knowledge, we are able to fill in gaps in communication that occur when a senior interacts within the health care system.

A High Staff Ratio

Allows our staff, the time they need, not only to meet residents' physical needs, but time to listen and meet residents social and emotional needs as well.
